EDUCATION

Texas A&M University

College Station, TX

Ph.D. Candidate, Mechanical Engineering; GPA: 4.0/4.0

Jan 2023 – May 2027 (Expected)

- Dissertation: *Dynamic Modeling and Optimal Control of District Heating and Cooling Systems*
- Advisor: Prof. Zheng O'Neill

Tongji University

Shanghai, China

Master of Engineering in Power Engineering; GPA: 4.9/5.0

Sep 2019 – Mar 2022

- Thesis: *Study on Leakage Diagnosis Method for Air Conditioning Water System Networks*

Tongji University

Shanghai, China

Bachelor of Science in Building Environment and Energy Engineering; GPA: 4.6/5.0

Sep 2015 – Jul 2019

RESEARCH INTERESTS

- Building/HVAC&R Energy Efficiency
- Intelligent Building Controls and Optimization
- District Heating and Cooling Systems (5GDHC)
- Heat Pump Technologies
- Model Predictive Control (MPC)
- Thermal Energy Storage (TES)
- Building Decarbonization and Electrification

RESEARCH EXPERIENCE

NSF PIRE: Building Decarbonization via AI-empowered District Heat Pump Systems

National Science Foundation (NSF)

Jan 2023 – Present

- Developed a high-fidelity virtual testbed of district heat pump systems integrating physics-based Modelica thermal models with AI-driven predictive control frameworks.
- Designed Model Predictive Control (MPC)-based optimal control frameworks for intelligent district energy system operation.
- Applied the framework to assess renewable and waste heat integration (e.g., data center heat recovery), demonstrating improved efficiency and carbon reduction potential.

DoD ESTCP: Building Energy Efficiency through Thermal Microgrids – Phase I Feasibility Study

Department of Defense (DoD) ESTCP

Jan 2024 – Jan 2025

- Developed and validated Modelica digital twins and machine-learning load forecasting models for a district energy system at a U.S. Army installation.
- Implemented MPC optimization for chiller plant operation and temperature reset strategies.
- Quantified modeled energy savings from the retrofit and performed a life-cycle cost analysis.

DOE: Solar-Geothermal District Heating and Cooling (Sol-GDHC) System – Citizen Potawatomi Nation

Department of Energy (DOE)

Dec 2023 – Sep 2024

- Contributed to the design of a 100% electrified geothermal district energy system for an Oklahoma tribal community.
- Developed an integrated simulation framework for system-level performance evaluation and annual operation analysis.
- Developed detailed Modelica component-level models of hybrid photovoltaic thermal (PVT) panels.
- Supported optimization of geothermal borehole design and loop temperature control strategies.
- Reduced projected electricity consumption by 38% and eliminated natural gas use in the retrofit scenario.

Master's Thesis: Leakage Diagnosis in Air Conditioning Water System Networks

Tongji University

Sep 2020 – Mar 2022

- Modeled thermo-hydraulic dynamics of a complex piping network and validated results against field measurement data.
- Developed a parameter identification approach for pipeline hydraulic resistance using metaheuristic optimization.
- Proposed a 2-stage leakage fault detection and diagnostics method using Adam-optimized neural networks.

PROFESSIONAL EXPERIENCE

PhD Research Intern

Jun 2025 – Aug 2025

Pacific Northwest National Laboratory (PNNL)

Richland, WA

- Validated DOE's TES Sizing Tool by executing 240+ parametric simulations across time-of-use and dynamic pricing tariff scenarios.
- Designed optimized Thermal Energy Storage (TES) dispatch control strategies, achieving up to 85% simulated electricity cost reduction.
- Collaborated with DOE's Stor4Build consortium to improve tool robustness for grid-interactive efficient buildings (GEBs).

Graduate Research Assistant

Jan 2023 – Present

Texas A&M University

College Station, TX

- Develop high-fidelity simulations for building and district energy systems using Modelica/Dymola and Python.
- Conduct research on predictive controls and optimization for energy-efficient smart energy systems.
- Contribute to NSF-, DoD-, and DOE-funded research projects on building decarbonization and district energy.

HVAC Engineer

Jul 2022 – Dec 2022

Envision Group

Shanghai, China

- Led development of AHU/chiller control optimization and fault detection & diagnostics (FDD) features for a smart building energy management platform.
- Coordinated with engineering and sales teams to align product design with client needs and deployment requirements.

CONFERENCE PRESENTATIONS (WITHOUT PROCEEDINGS)

- “Feasibility of Geothermal Borefield Integration in a 5th-Generation District Thermal Energy Network: A Case Study of an Oklahoma Tribal Community” — *Texas A&M Geothermal Research Opportunities Symposium*, Apr 2025. **2nd Place, Poster Competition**.
- “Building Decarbonization with a 5th Generation District Heating and Cooling (5GDHC) System: A Case Study of an Oklahoma Tribal Community” — *Texas A&M Conference on Energy, College Station, TX*, Sep 2024.
- “A Comparative Analysis of Energy Performance of Ultra-low Temperature District Heating and Cooling Networks with Different Substation Configurations” — *BAS2024 – Building Automation Symposium, Syracuse, NY*, May 2024.

ACADEMIC SERVICE

Peer Review

- Reviewer, *Science and Technology for the Built Environment* (2025–Present)
- Reviewer, ASHRAE Conferences – Winter & Annual (2025–2026)
- Reviewer, AEI International Research & Design Conference (2026)

ASHRAE Technical Committees

- Corresponding Member, TC 7.5 – Smart Building Systems (2025–Present)
- Provisional Corresponding Member, TC 6.2 – District Energy (2023–Present)
- Provisional Corresponding Member, TC 6.9 – Thermal Storage (2023–Present)
- Provisional Corresponding Member, TC 6.8 – Geothermal Heat Pump Systems (2023–Present)

Leadership

- ASHRAE Student Branch Officer, Texas A&M University (2023–2024): organized monthly technical seminars and promoted student engagement in ASHRAE activities and conferences.

HONORS & AWARDS

- ASHRAE Graduate Student Grant-in-Aid Award (2026)
- J. George H. Thompson Graduate Fellowship (2025)
- Mechanical Engineering Graduate Summer Research Grant (2024–2025, two awards)
- Mechanical Engineering Graduate Student Travel Award (2023–2025, three awards)
- Best Student Paper, American Modelica Conference 2024
- 2nd Place Poster, Texas A&M Geothermal Research Symposium (2025)
- Tongji University Scholarships of Excellence (2015–2018, four awards)
- National Endeavor Scholarship (2015–2016)

TECHNICAL EXPERTISE

Programming & Data: Python, MATLAB, C/C++

Modeling & Simulation: Modelica/Dymola, EnergyPlus, Ansys Fluent, EES

Controls & Optimization: Model Predictive Control (MPC), Metaheuristic Optimization, Machine Learning (Neural Networks, Load Forecasting)
